

Provide your staff with a simple, easy to use car pool booking system that also manages incidents, servicing, infringements and leases.

If your organisation uses Outlook or Excel to book fleet cars then you will already know it is a time consuming and inefficient process for your staff.

Imagine if your staff had a simple, easy to use web-based system to book cars. Imagine further if those bookings provided you with a centralised database to track incidents and damage, infringements, servicing, lease adjustments and CO2 emission report all in the one spot.

Introducing the Fleet Vehicle Booking System (FVBS) from Lingo Systems.

If you suspect there are cars in your fleet that are under utilised then FVBS will give you the evidence you need to reallocate cars to another department, purchase more cars or dispose of under utilised cars.

It's about vehicle utilisation – supply and demand.

Do you have too many cars in your fleet, or not enough? The answer will differ on who you ask!

As the fleet manager it is a tricky task balancing the supply and demand.

By providing staff with an easy-to-use centralised booking system, the bookings (demand) build a mountain of data from which to provide the utilisation facts to give you the true story.

But with utilisation comes usage side effects, like infringement notices, damage, servicing and not exceeding the lease kilometers.

That's where FVBS can help. Not only is it a clean, crisp web calendar for each car, but a complete back-end for managing the fleet (supply).

Request an demo today to see how FVBS can make your life a little easier:

Web-based vehicle calendars. On this date, at this location, what vehicles are available? Search by location, program, E-tag, or body type.

Control access. Restrict cars to general pool usage, departmental, program or exclusive use.

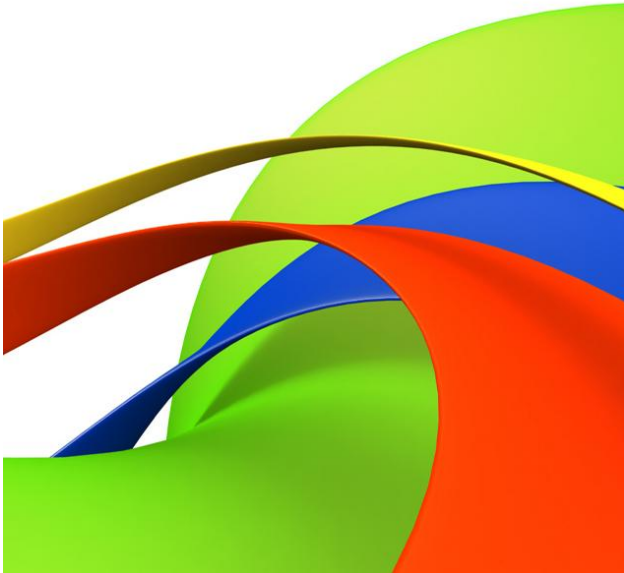

Servicing made simple. Automatic reminders are sent to vehicle custodians and campus administrators based on vehicle specific servicing regimes.

Centralised incident and damage reports. Centralised register of all incidents and damage makes case work light work.

Infringement notices made easy. Automatically request driver licence details from to report back to the issuing authority - no more manual emails.

Policy compliance. Provide links and summaries of your vehicle policies to all staff right at the time of booking.

CO2 Emission Reporting. Report on your fleet's vehicle emissions by organisation or department.

Vehicle utilisation reporting. Which cars in your fleet are the most utilised? Least utilised?

All vehicles. Include all vehicles in your fleet, including remuneration package cars and dedicated program cars. Limit bookings to shared cars but track incidents, infringements, CO2 output and servicing right across the organisation.

Keep your CFO happy. Fixed-fee annual licencing means budgeting is a snap, all inclusive of support, upgrades and maintenance.

Keep your IT Manager happy. Formal change management, 2nd level support, service level agreement and no software to install on user PC's.

Be up and running quickly. We can host the system on your servers or provide 'cloud' hosting for you. organisation or department.
